

Outdoor Life Adventures is a company that pursues innovation in every product, and our arc lighter is a prime example of that. Utilizing arc technology, the lighter allows users to safely and effectively light candles, grills, fireworks, and more.

As an environmentally conscious brand, we wanted to create an electric lighter that could be charged easily through a USB port. As well as being friendlier to your wallet, this is a lighter that uses no fuel and creates no waste. The rechargeable lighter allows high-voltage electrical currents to pass between two nodes, which create an arc of highly charged plasma. The plasma generates heat, which in turn lights the object.

360° Rotation

Unlike stiff-neck lighters, this flexible arc lighter is built with a flexible neck that is able to bend in every direction. Once bent, it keeps its shape, allowing for safer and more efficient lighting. No longer do you have to risk burning your fingers with matches and small lighters. This long lighter is perfect for lighting candles, BBQs, fireworks, stoves, and more.

Weatherproof

Ever used a traditional lighter or a match on a windy day? If so, you'll know that it is an almost impossible task. Matches and lighters have one thing in common – they have a flame that's vulnerable to weather. In fact, a small gust of wind is enough to prevent most flame lighters from working. On the other hand, an arc lighter uses electric pulse technology that is resistant to bad weather. It works by using an arc of highly-charged plasma to generate heat, which then lights the object.

Rechargeable Battery and LED Display

With real-time battery display, you'll never be caught out by a flat battery. The four LED lights shine bright, and turn off one by one as the power fades. Simply recharge the lighter before all of the lights turn off. To do this, simply plug the lighter into any nearby USB port. The cable (included) can be connected to any USB port, like a power bank or laptop. This allows you to conveniently charge the flexible arc lighter wherever you want.

Flameless Technology

The arc lighter uses innovative technology that allows you to light items without the need for a flame. This is a game-changing feature for all outdoor adventurers.

Environmentally Conscious

Unlike traditional lighters, which are powered by gas, we have developed an electric-powered lighter that is good for the environment.

Bottle Opener

As well as being a great lighter, you will find a bottle opener at the bottom of the tool. This feature helps to create the ultimate accessory for BBQs, camping, and more.

Positive Experience

We pride ourselves on our superior service. In fact, if there is any problem with the arc lighter, just let us know and we will take care of it.
